

PACAM

warehouse management technology

Your business is complex and your customers demand nothing less than perfection. PACAM thinks like a customer, and has created a scaleable, flexible and secure logistics technology platform that integrates seamlessly with your enterprise to become a virtual extension of your business.

As a leading 3PL provider, PACAM has made significant strategic investments in advanced warehouse and transportation management systems to enable our customers efficient and secure 24/7 access to their business critical information.

PACAM's Warehouse Management System (WMS) platform was developed by Zethcon Corporation, a solutions provider with more than 50 years of experience in third-party logistics. This software package, known as Synapse, powers PACAM and enables us to seamlessly manage the flow of information across our supply chain partners and directly with our customers.

FEATURES AND BENEFITS OF THE PACAM WMS

- Radio frequency and bar code enabled warehouse management system processes for real-time data capture throughout all facilities
- Efficient order management through integrated EDI transaction modules
- Convenient, secure web-based access to real-time inventory levels, order status and custom reports
- Reverse logistics and damaged goods processing
- Transportation and yard management systems to support tracking and efficient processing of containers, full truck load, less than truckload and rail car shipments
- Customer specific Bills of Lading
- Flexible pick-and-pack options for small parcel kitting and assembly
- Custom label and document generation
- System-driven cycle counting and physical inventory programs
- Automated FIFO rotation and lot control systems

Our systems are packed with functionality designed not only to continually improve the efficiency of our internal business operations but to provide tangible benefits for our customers as well.

After all, PACAM thinks like a customer and designed its logistics technology with you in mind.
